

Increase your capacity to recycle

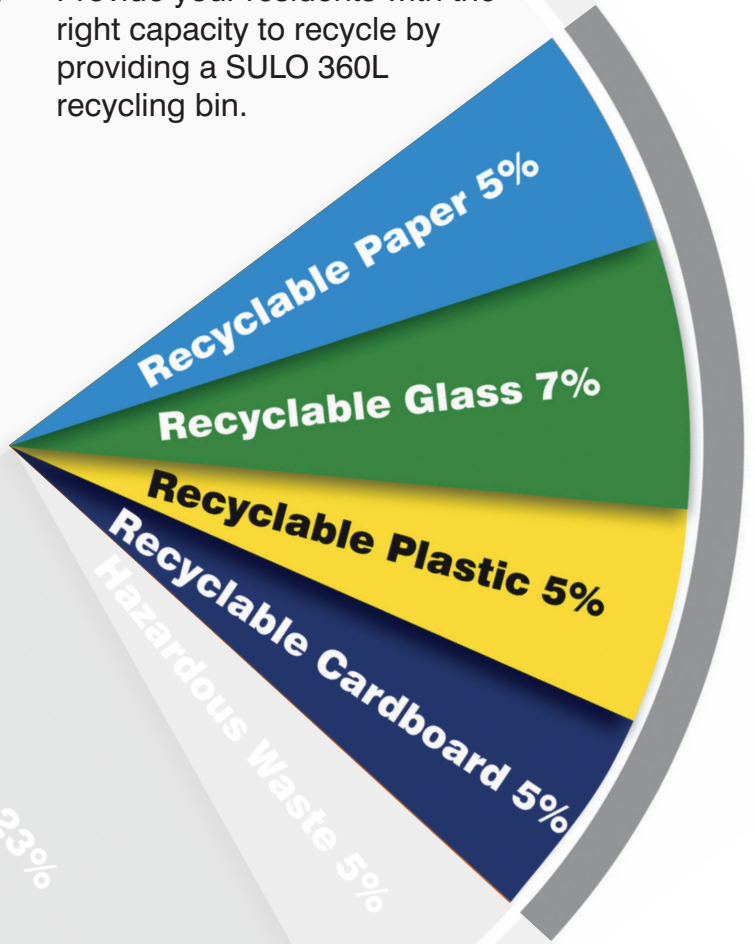

360 Litre Kompakt

The average household waste bin is reported to contain over 20% recyclable materials along with around 50% organic material. A lack of source separation by the household leads to leakage of recyclables into the residual waste stream. Leakage can be caused by apathy, lack of understanding or a lack of capacity in the recycling bin.

Improvements in the capture and diversion of recyclables is best achieved through a combination of adopting best practise models, targeted education campaigns and providing the right bin capacity. Residents with the right capacity can minimise leakage of recyclables into the waste stream and results in a direct saving on disposal fees.

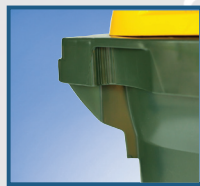

Provide your residents with the right capacity to recycle by providing a SULO 360L recycling bin.

Easy grip handles for maximum comfort

Greater capacity in a Kompakt footprint

Certified to AS4123
